

Sales Performance Analysis Dashboard

1. Business Problem

The company wanted to analyse its sales performance and identify opportunities to improve revenue, product demand, and regional performance.

2. Objective

The objective of this analysis was to examine sales trends, product category performance, payment method preferences, and regional sales distribution to support business decision-making.

3. Dataset Overview

Key Fields:

- Order ID
- Product Category
- Sales Amount ``
- Quantity Sold
- Region
- Payment Method
- Order Date

4. Tools Used

- Microsoft Excel
- Power BI

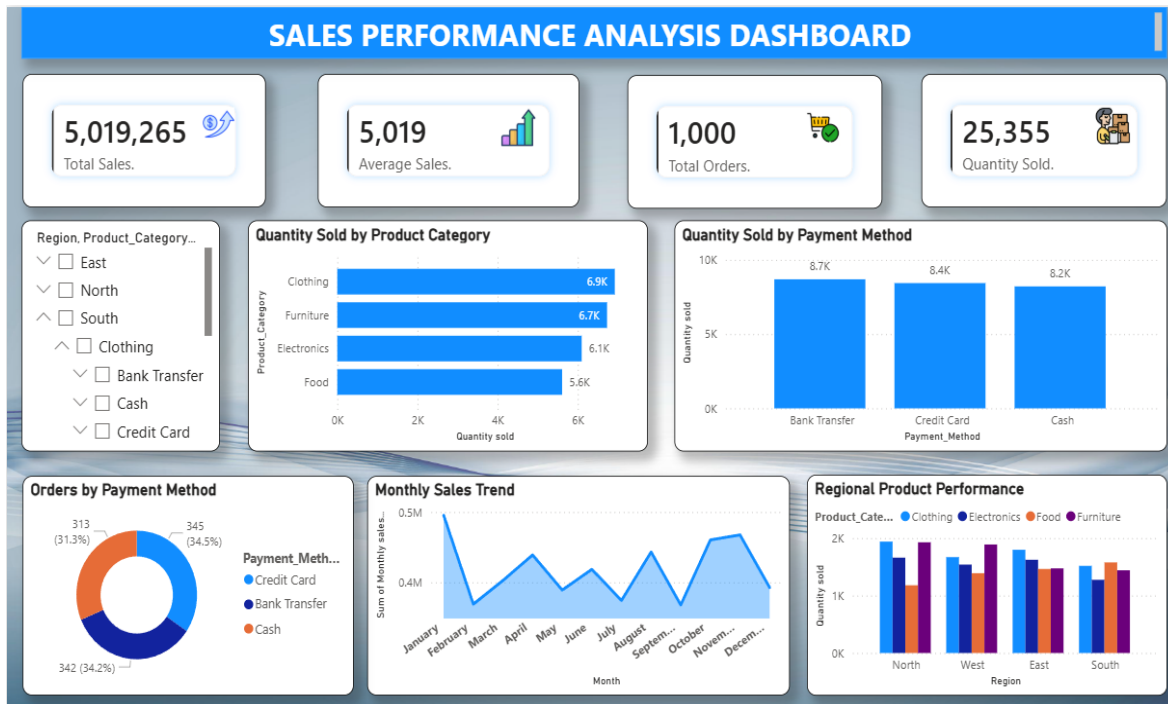

5. Analysis Process

- Imported and validated the dataset in Power BI.
- Created DAX measures for key KPIs.
- Built interactive visualizations and dashboards.

6. Key Metrics

- Total Sales: 5.02M
- Average Sales: 5,019
- Total Orders: 1,000
- Quantity Sold: 25,355

7. Dashboard Screenshot

8. Key Findings

- The company generated total sales of 5.02 million.
- A total of 1,000 orders were processed.
- 25,355 units were sold across all product categories.
- Certain product categories contributed more to total quantity sold than others.
- Customer payment preferences varied across payment methods.
- Sales performance fluctuated across different months.
- Regional performance differed across product categories

9.DAX Measures

- Total Sales = SUM ([Sales Amount])
- Total Orders = COUNT ([Order ID])
- Quantity Sold = SUM ([Quantity Sold])
- Average Sales = DIVIDE ([Total Sales], [Total Orders], 0)

10.Recommendations

- Focus marketing efforts on high-performing product categories.
- Improve sales performance in lower-performing regions.
- Optimize inventory planning based on sales trends.
- Promote popular payment methods to improve customer experience.

11. Conclusion

The Sales Performance Dashboard provides valuable insights into product demand, customer purchasing behaviour, payment preferences, and regional performance. These insights can support data-driven decision-making and help improve overall business performance.
